dbSNP:1800451).
-i- DISEASE: There is an association between low levels of MBL2 and a defect of opsonization which results in susceptibility to frequent and chronic infections.
-i- SIMILARITY: Contains 1 collagenous domain.
-i- SIMILARITY: Contains 1 C-type lectin famility domain.
-i- CAUTION: There are extensive differences between the revised sequence in Ref.1 and that published in Ref.2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ΰ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MANNOSE-BINDING PROTEIN CYS-RICH.

"Cloning and characterization of a cDNA encoding bovine mannan-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- FUNCTION: Binds mannose and N-acetylglucosamine in a calciumdependent manner. Is capable of host defense against pathogens, b activating the classical complement pathway independently of the antibody (By similarity).
-!- SUBBUNIT: Oligomeric complex of 6 set of homotrimers.
-!- SIMILARITY: Contains 1 collagenous domain.
-!- SIMILARITY: Contains 1 C-type lectin family domain.

SUBCELLULAR LOCATION: THIS PROTEIN IS LOCATED INTRACELLULAR, MOST
BEEDOMINANTLY IN THE ROUGH ENDOPLASMIC RETICULON AND IN THE GOLGI
APPRARTUS, AND LITTLE ON OMB IS PRESENT IN PLASMA MEMBRANES AND
LYSOSOMES. THE MBP IS EXCLUSIVELY LOCALIZED IN THE CISTERNAL
SPACE OF THE ORGANELLES, PROBABLY AS A LOOSELY BOUND MEMBRANE

SUBCELLULAR LOCATION: THIS PROTEIN IS LOCATED INTRACELLULAR, MOST
PREDOMINANTLY IN THE ROUGH ENDOPLASMIC RETICULUM AND IN THE GOLGI
APPARATUS, AND LITTLE OR NO MBP PRESENT IN PLASMA MEMBRANES AND
LYSOSOMES. THE MBP IS EXCLUSIVELY LOCALIZED IN THE CISTERNAL
SPACE OF THE ORGANELLES, PROBABLY AS A LOOSELY BOUND MEMBRANE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ρχ

Structure 7:255-264(1999).

C. -!- FUNCTION: Contributes to the lung's defense against inhaled microorganisms. Binds strongly maltose residues and to a lesser extract other alpha-glucosyl moieties. It could participate in the extracellular reorganization or turnover of pulmonary surfactant.

C. -!- SUBGUIT: Oligomeric complex of 4 set of homotrimers.

C. -!- SUBGUIT: Oligomeric complex of 4 set of homotrimers.

C. -!- PTM: The N-terminus is blocked.

C. -!- PTM: The N-terminus is blocked.

C. -!- PTM: There are 4 surfacellular.

C. -!- PTM: There are 4 surfacellular.

C. -- MISCELLANEOUS: Pulmonary surfactant consists of 90% lipid and 10% protein. There are 4 surfacellular (SP-A and SP-D) and 2 small hydrophobic proteins (SP-A and SP-D) and 2 small hydrophobic proteins (SP-B and SP-C).

C. -!- SIMILARITY: Contains 1 collagenous domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDINE 99197291; PubMed=10368295; Hakansson K., Lim N.K., Hoppe H.-J., Reid K.B.M.; "Crystal structure of the trimeric alpha-helical coiled-coil and the three lectin domains of human lung surfactant protein D.";

369 PULMONARY SURFACTANT-ASSOCIATED PROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunology 78:159-165(1933).

-!- FUNCTION: Contributes to the lung's defense against inhaled microorganisms. Binds strongly maltose residues and to a lesser extent other alpha-glucosyl moieties. It could participate in the extracellular reorganization or turnover of pulmonary surfactant.

-!- SUBGNIT: Oligomeric complex of 4 set of homotrimers.

-!- SUBCELLULANEOUS: Pulmonary surfactant consists of 90% lipid and 10% protein. There are 4 surfactant associated protein: 2 collagenous, carbohydrate-binding glycoproteins (SP-A and SP-D) and 2 small hydrophobic proteins (SP-B and SP-C).

-!- SIMILARITY: Contains 1 C-type lectin family domain.
                                                                                                                                                                                 640 AACAATGCTGGTTCTGATGAAGATTGTGTATTGCTACTGAAAAATGGCCAGTGGAATGAC

RT "Cloning of guinea pig surfactant protein A defines a distinct
RT cellular distribution pattern within the lung.";

RT Am. J. Physiol. 273:L900-L906(1997).

-I- FUNCTION: In presence of calcium ions, PSAP binds to surfactant phospholipids and contributes to lower the surface tension at the cair—liquid interface in the alveoli of the mammalian lung and is essential for normal respiration.

-I- SUBMITT: Oligomeric complex of 6 set of homotrimers.

CC -I- SUBCELLULAR LOCATION: Extracellular.

CC -I- MISCELLARROUS: Pulmonary surfactant consists of 90% lipid and 10% protein. There are 4 surfactant associated protein: 2 collagenous, CC carbohydrate-binding Glycoproteins (SP-A and SP-D) and 2 small hydrophobic proteins (SP-B and SP-C).

CC -I- SIMILARITY: Contains 1 collagenous domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
